

Generate a single HTML page with a dark theme. The body of the page should have a background color of #1a1a1a, be a flex container to center its content (justify-center, items-start), have a minimum height of 100vh, and 1.5rem padding around the main container.

The entire main content area of the page should be a single, large container with 1.5rem rounded corners, a background color of #282828, and a subtle box-shadow (0 4px 10px rgba(0, 0, 0, 0.3)). This container should be centered with a max-width suitable for mobile viewing (e.g., 400px), and its content must be vertically scrollable (overflow-y: auto;) if it exceeds the available height. Use the 'Neue Haas Grotesk Display Pro' font, loaded from <https://fonts.cdnfonts.com/css/neue-haas-grotesk-display-pro>.

The UI within this main container should consist of the following components, stacked vertically with 1rem spacing between them:

Header/Title:

A text-xl sized, font-semibold white text that reads: "You have [Number] unread emails". The [Number] should be dynamically populated based on the number of email items displayed.

Horizontal Spacer Line:

A thin horizontal line with a color of rgba(255, 255, 255, 0.1) and vertical margins of 1rem (achieved via my-4 or margin-top: 1rem; margin-bottom: 1rem;). This line should be placed directly after the Header/Title.

Email List (Dynamic Component):

The email list should be dynamically generated. For each email, the following data points should be used to render the component: sender name, sender initials, a sender-specific hex color for the avatar border, email subject, an optional snippet of the email body, an optional relative timestamp (e.g., "Yesterday"), an optional specific time (e.g., "3:31 PM"), and an optional boolean indicating whether a reply/forward icon should be shown. If an optional component's data is not provided, that component should not be rendered.

For each email, render an email item with the following structure:

Email Item Container: A div with flex items-start gap-4 relative.

Avatar: A 40x40px, rounded img tag with a 2px border using the sender's theme color. The src should be a placeholder image like [https://placeholder.co/40x40/\[SENDER_HEX_COLOR\]/FFFFFF?text=\[SENDER_INITIALS\]](https://placeholder.co/40x40/[SENDER_HEX_COLOR]/FFFFFF?text=[SENDER_INITIALS])).

Email Details: A div with flex-1 flex flex-col gap-2 containing the following:

Sender Name: A span with font-semibold text-sm bg-[#484848] px-3 py-1 rounded-xl w-fit text-white. This will display the sender's name.

Subject: A h2 with text-lg font-bold text-white mt-2. This will display the email subject.

Email Body/Snippet (Optional): A p with text-base text-gray-300. This will display the snippet of the email body. This text must be truncated with an ellipsis if it overflows its container's width (use Tailwind's truncate/overflow-hidden/whitespace-nowrap).

Status/Timestamp (Optional): A div with flex items-center text-sm text-gray-400.

Custom Blue Double Checkmark SVG Icon: (width="22" height="13" viewBox="0 0 22 13" fill="none" xmlns="http://www.w3.org/2000/svg") with a path (M5.70011 13.0001L0.0501099 7.3501L1.47511 5.9501L7.12511 11.6001L5.70011 13.0001ZM11.3501 13.0001L5.70011 7.3501L7.10011 5.9251L11.3501 10.1751L20.5501 0.975098L21.9501 2.4001L11.3501 13.0001ZM11.3501 7.3501L9.92511 5.9501L14.8751 1.0001L16.3001 2.4001L11.3501 7.3501Z fill="#1078FF") preceding the text: "Received: [Relative Timestamp], [Time]". The icon should have a mr-2 class.

Reply/Forward Icon (Optional): A button with absolute top-0 right-0 w-8 h-8 rounded-full bg-[#3A3A3A] flex items-center justify-center.

SVG Icon: (width="16" height="14" viewBox="0 0 16 14" fill="none" xmlns="http://www.w3.org/2000/svg") with a path (M7.99954 4.00958V0.182129L0.329407 7.00002L7.99954 13.8179V9.98592C10.2361 9.96191 11.5143 10.2111 12.3264 10.6171C13.1683 11.0381 13.5867 11.665 14.0699 12.6315L15.3329 12.3334C15.3329 9.47717 14.9232 7.32861 13.6125 5.92075C12.3937 4.61169 10.5325 4.08468 7.99954 4.00958Z fill="white").

Horizontal Spacer Line (between email items):

A thin horizontal line with a color of rgba(255, 255, 255, 0.1) and vertical margins of 1rem (achieved via my-4 or margin-top: 1rem; margin-bottom: 1rem;). This line should separate each email item, but not appear after the last one.

Data Processing & Optimization:

Remove "=====" Patterns: If any email body or subject contains a pattern of repeated equal signs (e.g., "=====" or similar, meaning three or more consecutive = characters), remove those patterns from the displayed data before rendering.

Custom CSS Rules:

Define CSS variables --card-custom-rounded: 1.5rem; and --card-custom-inner-rounded: 1rem;.

Apply font-family: 'Neue Haas Grotesk Display Pro', sans-serif; to the body.

Ensure text within the main content container (.main-content-container) prevents overflow with overflow: hidden; word-wrap: break-word; and overflow-wrap: break-word; for all direct children and specific text elements (paragraphs, headings, spans, and divs).

Add a CSS rule for .spacer-line with height: 1px; background-color: rgba(255, 255, 255, 0.1); and appropriate vertical margins of 1rem.

Here are image examples of the UI to be generated with possible variations based on the data provided.
